

9001-1350 BYPASS VALVE INSTRUCTIONS

#10 (including #'s 9 & 11)

#10 (including #'s 8 & 11)

Lubricate all o-rings with silicone grease or a white plumbers lithium grease; any type of lubricant that is **not petroleum based.**

Before installing make sure that the boring area for this valve is clear & free of debris & old valve parts.

1) This valve seat goes into the machine first; stem pointed inward, rounded end with o-ring facing outward.

2) The rounded end "fits on" the curved end of the seat.

3) Using a 24mm 6-point (hex) socket, push in then turn plastic valve body 1/4 to 1/2 clockwise until ears / tabs catch. Using an open end, crescent or channel lock wrench may crack or damage valve while installing.
